Data Management & Exchange Ltd

Information management is about getting the right information to the right people at the right time.

You make crucial business decisions based on the information you have available. If that information is incomplete, unreliable, or inaccessible, how can those decisions be the best ones for your business?

With the help of DMXL you can make the best possible use of all of your information.

All of our staff are graduate geologists or engineers with over 20 years experience and have worked in various industrial sectors including Petroleum Exploration, Civil Engineering, Agriculture, and the Public Sector.

As well as being highly experienced data managers and software developers they have also worked in mudlogging, wellsite geology, petrophysics, core logging, and site engineering so unlike many IT consultancies we can bring 'real world' additional expertise to your project.

DMXL specialist services include:

Database design and development.

Data migration and validation.

Bespoke software development.

Strategic information management consultancy.

2D Design drawing in AutoCAD™

Being an associate member of Geoscience Wales Ltd. (GWL) gives us access to expertise in other geoscience disciplines that we do not have in house.
