

wellstrat
SERVICES LIMITED

Supplier of Stratigraphic
Solutions

A full range of conventional and reservoir biostratigraphical analyses, hot-shot analyses and wellsite biostratigraphy, including biosteering, are offered. Disciplines covered include:

- Palynology – spores, pollen, dinocysts, acritarchs, chitinozoa
- Palynofacies – woody tissue, kerogen typing
- Micropalaeontology – foraminifera, radiolaria, ostracods
- Nannoplankton – coccoliths, nannoliths, silicoflagellates
- Palaeoenvironmental and biofacies interpretation
- High resolution sequence stratigraphy

Wellstrat Service's personnel and associate's world-wide experience covers the complete geological column and all continents but with special emphasis on the following areas:

- Middle East
- North Africa
- Northwest Europe
